New recombinant DNA construct, useful for improving plant tolerance to oold, hear, drought, herbicides, extreme osmotic conditions, pathogens or pests, for confering increased resistance to plant disease, or for improving yield.

Claim 1; SEQ ID NO 16472; 15pp; English.

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the interest o nvention

New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield; protein content; gene; ss. Tabaska JE, Screen SE, improving yield The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the polynucleotide ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmocia conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle'pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighth or plant growth regulators, for increasing the rate of homologous

Claim 1; SEQ ID NO 32541; 15pp; English.

or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the

invention

recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake

It currently consists of 13 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as soon as it is available and the accession number will be preserved.

It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0: gap of unknown length contig of 16458 bp in length 3: contig of unknown length 1: contig of unknown length 1: contig of 6652 bp in length 3: gap of unknown length 5: gap of unknown length 5: gap of unknown length 5: contig of 1432 bp in length 5: gap of unknown length 5: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length 6: gap of unknown length

Consortium for Maize Genomics - BAC skim sequencing and assembly NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. f unknown length g of 2461 bp in length f unknown length g of 3068 bp in length f unknown length length bp in length length bp in length contig of 3163 bp in length gap of unknown length contig of 2199 bp in length gap of unknown length length bp in length length bp in length of 3288 bp in length bp in length Web site: http://www.tigr.org/tdb/tgi/maize/ length unknown contig gap of gap of 23289 23389 26300 26400 28051

It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This consensus information

This consensus is derived from a shotgun assembly that has been manually curated. It is the best representation of the BAC that we can generate without further laboratory work. The draft assembly has been edited, and if possible, ends identified by vector as well as by BAC end sequences, and contigs ordered and oriented. Bases that are not Ns are either above Q20 or manually edited. This assembly was performed with phrap. All trace files for this project are available at the NCBI trace repository

(http://www.ncbi.nlm.nh.gov/Traces/trace.fcgi?). An exact list of reads used in this assembly are available at http://www.broad.mit.edu/annotation/plants/maize/randomclones.html:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 197002

RESULT
```

The present invention relates to the isolation of plant regulatory sequences from the male reproductive tissues of corn (Zea mays). The promoter sequences, fragments, regions or cis elements of the sequences, are capable of regulating transcription of an operably linked DNA

Claim 1, Page 113-114; 121pp; English.

```
sequence. The promoter sequences confer enhanced expression of operably linked genes in monocot or dicot male reproductive tissues, such as anthers, especially wheat anthers and is useful for regulating transcription of a DNA sequence, by operably linking the DNA sequence the promoter. The promoter sequences are useful in plants to regulate transcription of target genes including genes for control of fertility, insect or pathogen tolerance and herbicide tolerance. They are also useful as probes or primers in nucleic acid hybridisation experiments. The promoter sequences can be used in hybridisation assays of other plant tissues to identify closely related or homologous genes and associated regulatory sequences. AAS96558-AAS96577 represent the corn promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540

The present invention relates to the isolation of plant regulatory sequences from the male reproductive tissues of corn (Zea mays). The promoter sequences, regions or cis elements of the sequences, are capable of regulating transcription of an operably linked DNA sequence. The promoter sequences confer enhanced expression of operably linked DNA sequence. The promoter sequence, by operably linking the DNA sequence and is useful for regulating the DNA sequence. The promoter sequences are useful in plants to regulate transcription of a DNA sequence, by operably linking the DNA sequence to the promoter. The promoter sequences are useful in plants to regulate transcription of target genes including genes for control of fertility, insect or pathogen tolerance and herbicide tolerance. They are also useful as probes or primers in nucleic acid hybridisation assays of other plant the promoter sequences can be used in hybridisation assays of other plant tissues to identify closely related or homologous genes and associated transcription sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1210
